

5 Tips Protect Your Dog From DEHYDRATION

The risk of dog dehydration increases during summer. Protect your dog with these **simple steps**.

Adequate Water

Ensure your dog drinks at least 50–60 ml/kg of its body weight.

Check your Dog's bowl

Frequently refill the Water. Check the amount of water level reduced.

Keep the bowl clean

Clean your dog's feeding bowl diligently and regularly to prevent bacteria accumulation.

Carry a Water Bottle

Carry a portable dog water bottle whenever you move out with your pet.

Fewer exercises

Avoid doing strenuous exercises with your dog in the scorching summer heat.
