## SPRING TIME Dangers for Pets

### FLOWERS & PLANTS

Not all are toxic, but sadly some are poisonous and pernicious. So be careful when spending time outdoors.

### NO FERTILIZERS & WEED KILLERS

Kick out the unsafe and grab the dog-safe mulches, or it can lead to severe health conditions. Check with your vet if you need more clarification on the plants.

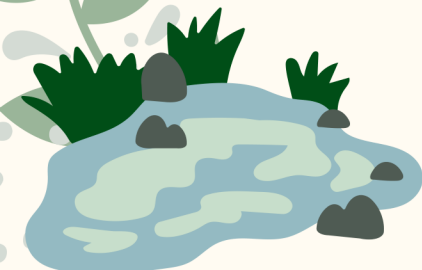

### DECORATION

Decorating our house is fantastic. But it can be devastating for your Fido sometimes. So be aware of your surroundings.

### STANDING WATER

Spring showers are beautiful, not puddles. But unfortunately, it may tempt your pets to drink from it, which leads to allergies and other medical conditions.

### OPEN WINDOWS

Opening the windows after a long, frigid winter may attract your pets to look out. But unfortunately, it can be a doorway to major injuries if you are not cautious.

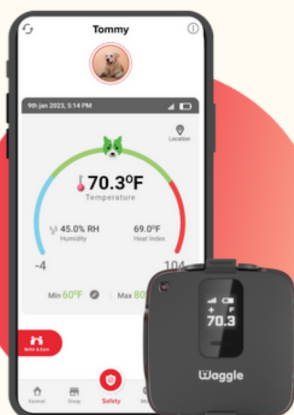

### EASTER EGGS

Easter eggs are awesome. But for pets, it's lethal eggs. They could assume it was their new toy to roll over. So keep it away from their attention.

## PET PROTECTION

ANYTIME, ANYWHERE

Heatstrokes are deadly. When you leave your pets in the RV/car, use a **Waggle Pet Monitor** to get real-time updates of their environment temperature from anywhere.
