

PET Killers During SPRING

Flowers & Plants

Not all are toxic, but sadly some are noxious and pernicious. So be careful when spending time outdoors.

No fertilizers & weed killers

Kick out the unsafe and grab the dog safe mulches, else it can lead to serious health conditions. Check with your vet if you're not sure with the plants.

Decoration

Decorating our house is awesome. But it can be a devastation for your Fido sometimes. So be aware of your surroundings.

Standing Water

Spring showers are beautiful, not puddles. It may tempt your pets to drink from it which leads to allergies and other medical conditions.

Open Windows

Opening the windows after a long frigid winter may attract your pets to look out. It can be a doorway to major injuries if you are not cautious.

Easter Eggs

Easter eggs are awesome. But for pets, it's lethal eggs. They could assume it as their new toy to roll over. So keep it away from their attention.

Heatstroke

Heatstrokes are deadly. When you leave your pets in the RV/car, use a Pet Monitor to get real-time updates of their environment temperature from anywhere.
