

How To Stop Puppy Howling At Night?

Crate Training Your Puppy:

Simulate a den with a covered crate, comfort, and treats to ease overnight stays and reduce howling.

Daytime Puppy Stimulation:

Engage with interactive toys and longer walks to ensure a quieter, more restful night.

Bedtime Puppy Treats:

Give a long-lasting chew at night to promote quiet, enjoyable crate time. Opt for safe, natural options.

Final Potty Trip:

Take your puppy out to a regular spot for a potty break before bedtime.

Ignore Midnight Howls:

Don't reward nighttime howling, use calming sounds and consult a vet for persistent issues.
